Origami Crown

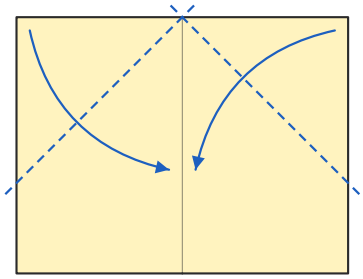

Step-by-step folding instructions

1

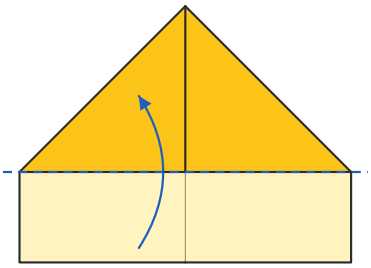

1. Cut a sheet of printer paper into four equal pieces. Take one, held sideways, white side up. Fold it in half from side to side, then unfold.

2

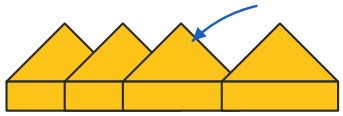

2. Fold the two top corners down to the centre crease.

3

3. Fold the bottom strip up over the triangles. This is one unit.

4

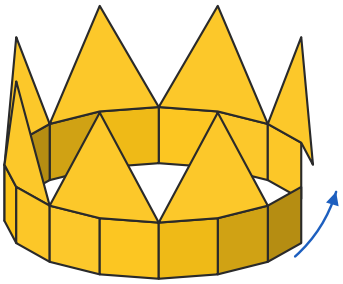

4. Make eight units the same way. Slide the bottom corners of one unit into the band of the next, so they overlap by half.

5

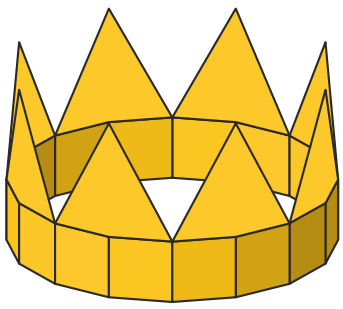

5. Keep adding units until all eight are linked in a long strip.

6

6. Bend the strip into a ring and slide the last unit into the first one. Add more units if it is too small for your head.

Done. Your crown is done. A drop of glue or tape on each joint makes it stronger.
